

Benefits you can enjoy  
by choosing Premier  
SIPs for your home:

## **STRONGER.**

**Far stronger than stick-frame construction...**

- Extensive testing confirms that Premier SIPs are stronger than convention framing
- Strong framing product allows for longer spans often without an attic/truss system
- More durable against earthquakes, storms and insects

## **STRAIGHTER.**

**Why settle for the imperfections of lumber?**

- Large panels form straight and consistent engineered walls with less warps and cracks than stick framing
- No studs, so you can hang artwork and shelving wherever you want
- No more bowed walls; enjoy straight walls, doorways, windows and archways

## **GREENER.**

**The ultimate green framing product...**

- Up to 60% savings on heating/cooling costs
- Better indoor air quality and exceptional comfort
- Reduced pollutants and energy consumption
- Premier SIPs provide valuable points towards building initiatives (LEED, NAHB GBG, Article 24, etc.)

Information for Homeowners

# Building Better Homes with Premier SIPs

STRONGER. STRAIGHTER. GREENER.

STRONGER. STRAIGHTER. GREENER.

# Premier Building Systems

You've heard the buzzwords: sustainable, quality, green. When it comes to home building or renovation, all these words apply to the same thing: making informed decisions and choosing the right building products.

With more than 20 years experience, Premier Building Systems is North America's largest manufacturer of Structural Insulated Panels (SIPs). Our trained project representatives are ready to help you learn how SIPs can have the

best impact on the environment... and your family!

## Benefits of Building with Premier SIPs

What could be better than reducing your home's heating and cooling costs by up to 60%? How about the fact that Premier SIPs offer these savings as well as a stronger, healthier structure for your family to call home.

One of the most environmentally conscious home framing products available, Premier's pre-insulated SIPs offer homeowners tight and solid construction from roof to floor. Endless design options offer homeowners a product for the entire building envelope that will withstand all weather conditions better than traditional framing methods.

In addition to qualifying for tax benefits and achieving superior home resale values, homeowners who build with Premier SIPs will have peace of mind for choosing a stronger home framing product that is good for the environment.

## A Difference for the Homeowner

- Reduced heating/cooling costs by up to 60%
- Quiet and comfortable interior environment
- Warmer in the winter and cooler in the summer
- Superior indoor air quality
- Reduced penetration of airborne pollutants such as odors, molds, and bacteria
- Stronger than traditional framing methods to protect against mother nature (storm, insect, and earthquake resistant)
- Peace of mind through a sound warranty\*

Please browse our website and contact us to learn how Premier SIPs can help you build the most comfortable home or addition that you have ever lived in!

## Premier SIPs House Compared to Stick Frame Construction

**Roofs, Walls & Floors; 2,000 sq. ft.**

### Faster Installation

Pre-cut panels can arrive to the job site ready to install, and can save up to 60% on combined labor on overall framing, trim/millwork, window, door and flooring installations.

### HVAC System Reduction

Up to 40% smaller HVAC system

### Job site Waste Savings

Up to 60% less job site framing lumber waste

### Straighter Walls

Stronger, straighter roofs, walls and floors that don't bow, warp or bend. With SIPs, there are no studs so you can hang artwork and shelving just about anywhere.

### End Building/Home Owner Utility Savings

Up to 60% savings on energy bills for your customers. Definitely a selling point.

### Bottom Line

SIPs are the superior roof, wall and floor framing product that can help you differentiate your business. PBS SIPs arrive to the job site in large panels that are pre-insulated and can be pre-cut to your floor plans. They are installed in days, not weeks. While SIPs have slightly higher materials costs (as compared to traditional stick frame lumber and installation packages) the framing installation labor savings, smaller HVAC system, reduced job site waste, tax incentives and environmental benefits easily make up the difference.
